SUMMARY

Cross-domain engineer, competitive builder who turns messy problems into production-scale prototypes fast — 4× hackathon placements. Comfortable moving between full-stack, multi-agent AI, and drone/robotics systems; hand me a documentation link and a deadline and I'll figure out the rest.

EXPERIENCE

Mechatronics & Researcher

Sep 2025 – Present

UAS NMIMS (Drone Team)

- Engineered autonomous drone control systems and sensor-fusion pipelines, ensuring stable flight and real-time telemetry.
- Secured top national ranks at 5+ elite competitions (ISRO, Boeing, SAE Aerothon) across IITs and IISc.

Technical Content Writer

Aug 2024 – Dec 2024

Freelance

- Authored 10+ deep-tech scripts generating 3M+ views by translating complex engineering concepts for mass audiences.
- Applied high-retention storytelling to simplify technical systems, directly translating to clear documentation and pitches.

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript, TypeScript, SQL

Frameworks & Tools: Next.js, FastAPI, Streamlit, Docker, ROS 2, Supabase, Git, Linux

AI/ML & Vision: LLMs, Multi-Agent Systems, LangChain, RAG, YOLOv8, OpenCV, MediaPipe, HuggingFace

KEY PROJECTS

CREWYARD | *Founder & Builder — Developer Community Platform*

- Founded and built a GitHub-verified Next.js platform connecting Tier-2/3 college developers for project collaboration, networking, and competition.
- Implemented college verification, a reputation system, full-text search, and secure authentication end-to-end, growing the platform from zero to 500+ live users.

FORGE | *AI-Powered Career Intelligence Platform*

- Architected a multi-agent AI system (Nexus Agent Network) powering real-time resume building, recursive mock interviews, and ATS-scoring, beating 150+ competing teams for 1st place.
- Integrated LLM orchestration with an ATS-scoring Career Intel Panel, shipping a production-ready platform deployed live.

RESQ LIVE OPS / Mission Control | *Offline-First Autonomous Drone SAR System*

- Designed an offline-first mission-control system enabling autonomous drones to run search-and-rescue operations in disaster zones with zero connectivity dependency.
- Optimized the YOLOv8 inference pipeline, cutting detection latency by 40% while preserving accuracy — enabling faster real-time victim and hazard identification in the field.

Autonomous Drone Infrastructure Inspection System

- Built an end-to-end ROS 2 + Docker + YOLOv8s pipeline for real-time defect detection and geo-tagging, placing top 3 among 200+ teams from 45+ colleges in a 48-hour build.
- Delivered a live mission dashboard (FastAPI + Next.js) with telemetry, video streaming, and 3D mapping for infrastructure inspectors.

AWARDS & ACHIEVEMENTS

1st Place — Innovent 2026 (SOBUS & IIC) — outperformed 150+ teams

1st Place — Ideathon 2.0 2026 (Innovation Cell) — won among 80+ teams

1st Place — Google Developer Groups Hackathon 2026 — won among 50+ teams in a 24-hour sprint

3rd Place — BGI Hackathon, Indore 2026 — 200+ teams, 45+ colleges, Autonomous Drone track, 48-hour build

EDUCATION

NMIMS MPSTME

B.Tech in Computer Science — 3rd Semester, CGPA: 8/10

Maharashtra, India

2025 – 2029
