PROFESSIONAL SUMMARY

Senior Full-Stack & Autonomous AI Systems Engineer candidate with a background in B.Tech in Computer Science from NMIMS MPSTME, Maharashtra. Demonstrates hands-on engineering capabilities across Python, TypeScript, Next.js, FastAPI, ROS 2, with a focus on production-grade software, clean system architecture, and measurable project delivery.

EXPERIENCE

Mechatronics and Researcher | UAS NMIMS — Drone Team

Sep 2025 – Present

- Engineered autonomous drones.
- Integrated sensors and telemetry.
- Competed in drone competitions.
- Engineered drone control systems.

Freelance Technical Content Writer

Aug 2024 – Dec 2024

- Authored technical scripts.
- Communicated engineering topics to people.
- Created content about technical subjects.
- Some of the content received millions of views.

SKILLS

Core Skills: Python • TypeScript • Next.js • FastAPI • ROS 2 • LLMs • Multi-Agent AI • YOLOv8 • C++ • Java • JavaScript • SQL • Streamlit • Docker • Supabase • Git • Linux • LangChain • RAG • OpenCV • MediaPipe • HuggingFace

EDUCATION

B.Tech in Computer Science | NMIMS MPSTME, Maharashtra

2025 – 2029

PROJECTS & KEY INITIATIVES

Drone Infrastructure Inspection

- Architected a drone inspection system.
- Leveraged ROS 2, Docker and YOLOv8.
- Implemented defect detection.
- Implemented location information.
- Architected a dashboard using FastAPI and Next.js.
- Implemented telemetry, video and 3D mapping.

Crewyard

- A platform for college developers.
- Architected a website using Next.js.
- Connected students for projects and competitions.
- Implemented GitHub verification.
- Implemented search and authentication.
- Scaled platform to more than 500 users.

ResQ Live Ops

- Architected a system for drones used in disaster areas.
- Architected it to work without internet.
- Leveraged YOLOv8 for detection.
- Engineered detecting people and hazards.

FIFA-prediction

- Architected hardcoded af using Python, implementing modular design and end-to-end functionality.
- Configured version control, automated component structure, and deployment readiness across core repository workflows.
- Published open-source repository on GitHub with documented setup and active community engagement (1 stargazers).

FORGEv1

- Engineered FORGEv1 application using TypeScript, structuring modular codebase architecture and core workflows.
- Configured version control, automated component structure, and deployment readiness across core repository workflows.
- Authored complete project documentation with reproducible build instructions and structured commit history.

Forge

- AI career platform.
- Architected an AI system for resumes and interviews.
- Leveraged multiple AI agents.
- Implemented resume scoring.
- Implemented mock interviews.
- Won a hackathon with the project.

CERTIFICATIONS

1st place — Innovent 2026

- 1st place — Ideathon 2.0 2026
- 1st place — Google Developer Groups Hackathon 2026
- 3rd place — BGI Hackathon 2026
